

Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently amended) A beverage making device comprising a brewing chamber—(5), the brewing chamber (5)—being defined by an upper wall (4)—with one or more holes (3)—through which a heated water liquid can enter the brewing chamber—(5), and by ~~the~~ a wall of a first removable part having an edge that can abut against said upper wall (4)—via first sealing means (19)—~~in order to~~ form the brewing chamber—(5), said first removable part being provided with outlet means (8)—for guiding ~~brewed~~ the heated liquid out of the brewing chamber—(5), ~~characterized by~~ and a second removable part comprising means for guiding the heated water liquid from said one or more holes (3)—to outside the device without contacting said upper wall, ~~where the heated water can be caught in one or more cups,~~ which second removable part is interchangeable with said first removable part.

2. (Currently amended) A The beverage making device as claimed in

claim 1, ~~characterized in that~~wherein said outlet means ~~(8)~~ of said first removable part guide the liquid into another chamber ~~(9)~~.

3. (Currently amended) A ~~The~~ beverage making device as claimed in claim 1, ~~characterized in that~~wherein said second removable part comprises second sealing means ~~(27)~~ for abutting against said upper wall ~~(4)~~ around said one or more of said holes (3) and wherein said second sealing means guides the heated liquid from said one or more holes to outside the device without contacting said upper wall.

4. (Currently amended) A ~~The~~ beverage making device as claimed in claim 3, ~~characterized in that~~wherein said second sealing means ~~(27)~~ are tube-like members made from a flexible material.

5. (Currently amended) A ~~The~~ beverage making device as claimed in claim 1, ~~characterized in that~~wherein said second removable part comprises restriction means ~~in order to limit the~~ an amount of heated ~~water~~ liquid passing through said one or more holes ~~(3)~~ beyond what is limited by said one or more holes.

6. (Currently amended) A ~~The~~ beverage making device as claimed in

claim 5, ~~characterized in that~~wherein the restriction means are located near said one or more holes ~~(3)~~.

7. (Currently amended) A ~~The~~ beverage making device as claimed in claim 1, ~~characterized in that~~wherein said second removable part comprises means for closing one or more of said holes ~~(3)~~ to restrict the heated liquid from being guided to outside the device through the closed one or more holes.

8. (Currently amended) A ~~The~~ beverage making device as claimed in claim 1, ~~characterized in that~~wherein said means for guiding the heated ~~water~~ liquid to outside the device comprise two outlets for the ~~water~~heated liquid, so that two cups can be simultaneously filled with the heated waterliquid.

9. (Currently amended) A ~~water~~ liquid outlet module in the form of a second removable part for a beverage making device comprising a brewing chamber ~~(5)~~, the brewing chamber ~~(5)~~ being defined by an upper wall ~~(4)~~ with one or more holes ~~(3)~~ through which a heated water liquid can enter the brewing chamber ~~(5)~~, and by ~~the~~ a wall of a first removable part having an edge that can abut against said

~~upper wall (4) via first sealing means (19) in order to form the~~
~~brewing chamber (5), said first removable part being provided with~~
~~outlet means (8) for guiding brewed the heated liquid out of the~~
~~brewing chamber (5), characterized in that wherein the water liquid~~
~~outlet module is a second removable part comprising~~comprises ~~means~~
~~for guiding the heated water liquid from said one or more holes (3)~~
~~to outside the device without contacting said upper wall, where the~~
~~heated water can be caught in one or more cups, which said second~~
removable part is interchangeable with said first removable part.

10. (Canceled)

11. (New) A beverage making device comprising a brewing chamber, the brewing chamber being defined by an upper wall with one or more holes through which a heated liquid can enter the brewing chamber, and by a wall of a first removable part having an edge that can abut against the upper wall via a first seal to form the brewing chamber, the first removable part being provided with outlets configured to guide the heated liquid out of the brewing chamber, and a second removable part comprising one or more tubes configured to guide the heated liquid from the one or more holes to

outside the device without contacting the upper wall, which second removable part is interchangeable with the first removable part.

12. (New) The beverage making device as claimed in claim 11, wherein the outlets of the first removable part are configured to guide the liquid into another chamber.

13. (New) The beverage making device as claimed in claim 11, wherein the one or more tubes are configured to abut against the upper wall around the one or more holes.

14. (New) The beverage making device as claimed in claim 13, wherein the one or more tubes are made from a flexible material.

15. (New) The beverage making device as claimed in claim 11, wherein the one or more tubes are configured to limit an amount of heated liquid passing through the one or more holes beyond what is limited by the one or more holes.

16. (New) The beverage making device as claimed in claim 11, wherein the one or more tubes are configured to close one or more

of the holes to restrict the heated liquid from being guided to outside the device through the closed one or more holes.

17. (New) The beverage making device as claimed in claim 11, comprising two outlets operably coupled to the one or more tubes, wherein the two outlets are configured to guide the heated liquid simultaneously to two separate cups.
